PROJECTS

Student Management System | Full Stack Developer

Link: <https://github.com/ayesharazzaq239/student-management-system>

- Developed dynamic Student Data Forms using Laravel Breeze & SQLite to execute backend CRUD operations efficiently.
- Designed clean, user-friendly frontend views integrated with database-driven controllers for instant data retrieval.
- Implemented secure role-based user authentication across access levels to protect sensitive student data.

EBook System Application | Full Stack Developer

Link: <https://github.com/ayesharazzaq239/EBook-System>

- Developed 1 full-stack web application with secure authentication and database management utilizing PHP and MySQL.
- Structured MySQL database tables to manage digital book records and handle CRUD operations efficiently.
- Formatted clean, responsive UI layouts using HTML5, CSS3, and Bootstrap for 100% cross-device rendering.

Safe Carz - Vehicle Insurance Website | Frontend Developer

Link: <https://github.com/ayesharazzaq239/SAFE-CARZ>

- Built 1 modern multi-page frontend interface for a vehicle insurance website using HTML5, CSS3, and Bootstrap.
- Implemented custom navigation components and interactive quote request forms, ensuring compatibility across major web browsers.
- Structured responsive user layouts to optimize lead capture and increase form conversion efficiency.
